PHOENIX TS

Jira Fundamentals

Course Overview

The course starts with a variety of recipes to help manage users and workflows. Participants will learn how to set up custom forms and capture important data with custom fields and screens. Next, they'll gain insights into the latest email capabilities, which will assist with everything from managing outgoing email rules to processing incoming emails for automated issue creation. Later, they'll be guided through running scripts to automate tasks, getting easy access to logs, and even working with tools to troubleshoot problems. The course will also ensure participants understand how to integrate Jira with Slack, set up SSO with Google, and delegate administrator permissions. Finally, participants will cover Jira Service Desk to set up and customize their own support portal, work with internal teams to solve problems, and achieve optimized services with Service Level Agreement (SLA).

At the conclusion of this course, participants will be able to do the following:

- Understand Jira's data hierarchy and how to design and work with projects in Jira
- Use Jira for agile software projects, business process management, customer service support, and more
- Understand issues and work with them
- Design both system and custom fields to behave differently under different contexts
- Create and design your own screens and apply them to different project and issue types
- Gain an understanding of the workflow and its various components
- Set up both incoming and outgoing mail servers to work with e-mails

Schedule

Course Outline

Module 1

- Jira Architecture
- Understanding Project Types
- Jira Permissions
- Project User Interfaces
- Project Browser
- The Project Administration Interface

PhoenixTS

301-258-8200 | Sales@PhoenixTS.com | www.PhoenixTS.com
